Hi Joe, That's great! It's not necessarily needed for next Wed. If this is the County GIS, I signed an agreement several years ago w/ Nassau for access to the dbf(?) file The list you have is probably most important as it will be helpful to know which individual wells are currently unimpacted.

Talk with you again Mon...or Sat night! Jack has a map at USGS from our previous collaborations , but not the treated/not treated wells.

Rob

I have the wells on our GIS database and could also provide a listing of treatment by well. I recently made a list of all wells with VOC treatment in Nassau. Let me know but, am not sure I could have everything by next Wednesday.

I don't have the list of well with treatment activities. I just have their locations.

Hi Joe and Jack, this is probably easily doable if not already done by either USGS or NCDOH. If it's GIS format even better. Looking for all of the area in eastern Nassau, but most likely easier to get whatever on full County and be done with it... It is not for public release, but planning purposes. The "treatment" Carol is concerned with is due to impacts from environmental issues, not simply iron reduction, bacterial treatment or "softening type" treatment.

Any suggestions?

Thanks Rob. It definitely would be useful to periodically receive updates regarding which water supply wells have systems in-place, under design, etc, since I am asked about the status very often. I can ask Steve about this. I don't think we need more than one code on the actual map regarding the names of the wells, as long as there is a key or table available to identify the various names of each well. I have that information for most of the drinking water wells in BWD and SFWD. We can talk more next week.

Thanks, I'll add it to my calendar at home. Do you think it would be beneficial if a separate map was available for planning purposes that simply showed all the actual public supply wells, the official NYSDEC permit ID number, screen interval, current water district owner, and the "local" name given to the well? Some of the districts have also been sold, so new names are needed. I know the Bethpage Water District has been building a new public supply well somewhere in Bethpage Park, but that is not currently in our actual database. Also, the different consultants use different "names" for the wells, and USGS basically only knows them as the NYS ID number. It might also be a consideration to include a key or note as to whether there is a treatment system on the well, in process of design/construction, or currently none planned. This may be something Steve Scharf could suggest from Navy as they most likely are the ones who know already. Will talk next week.

Thanks Rob. If you want to attend, please feel free to do so. This meeting should be particularly interesting due to recent developments regarding groundwater contamination.

Hi Carol, I received courtesy notice that the next RAB meeting regarding the Northrop/Grumman Navy Bethpage area is scheduled the evening of Nov 5. That is a Wednesday evening and I do not teach that night and am available to attend. Please let me know if you would like me to attend. I'll bring in copies of their handouts.

Regards,

Rob
